# Subject Index

**Adolescents,** idiopathic scoliosis, bracing for, history and future trends in (editorial), 2
**Amputee**
below-knee, Seattle Lite Foot vs. Genesis II, comparison during walking and running, 9
cardiovascular disease risk factors and, 80
diabetic, prosthetic foot effects on reducing plantar pressures, comparison study, 92
transfemoral, ground reaction forces during prosthetic training, 72
transtibial
kinematic and kinetic data of prosthetic design, 120
physical activity level and walking accommodation, prostheses comparison, 60
wound healing relation to surgical technique, 48
upper limb, perceptual assimilation of prosthesis, 5

**Bracing,** idiopathic scoliosis, history and future trends in (editorial), 2

**Cardiovascular disease,** risk factors in amputees, 80
**Computer-assisted design/computer-assisted manufacturing**
prosthetic socket digitization and, 55
transtibial prosthetic socket, fabrication using selective laser sintering, 97

**Editorials,** Bracing for idiopathic scoliosis: Where do we go now?, 2
**Editor's Notes,** 1, 47, 71, 105
**Energy efficiency,** prosthetic design, kinematic and kinetic data, 120
**Ergonomics,** knee-ankle-foot orthosis, anterior vs. posterior design, performance, satisfaction, and patient well-being, 33
**External fixator,** application of, preoperative molds to decrease operating room time for, 52

**Facioscapulohumeral dystrophy,** fixation orthosis for, 106
**Flex-Foot,** physical activity level effects on walking and, transtibial amputee, prostheses comparison, 60

**Gait analysis**
efficiency, physical activity level effects on, transtibial amputee, prostheses comparison, 60
walking speed, low-cost system for assessment of, 117
**Ground reaction forces,** during prosthetic training, transfemoral amputatee, 72

**Journal of Prosthetics and Orthotics** (JPO), article quiz, 7, 68, 78, 125

**KAFO:** *see* Orthosis, knee-ankle-foot

**Liner material,** prosthetic, flow constraint and loading rate effects on, human tissue mechanical response to, 15

**Mechanical properties,** prosthetic liner material, human tissue mechanical response and, 15

**Neurophysiological control,** upper limb prosthesis, 5

**Orthosis**
biomechanical, as initial treatment in patellofemoral pain syndrome, 110
fixation, facioscapulohumeral dystrophy and, 106
knee-ankle-foot, anterior vs. posterior design, performance, satisfaction, and patient well-being, 33

**Patellofemoral pain syndrome,** biomechanical foot orthoses effectiveness as initial treatment, 110
**Patient satisfaction,** KAFO, anterior vs. posterior design, 33
**Perceptual assimilation,** upper limb prosthesis and, 5
**Physical activity,** walking and, transtibial amputation and, prostheses comparison, 60
**Plantar pressures,** prosthetic foot effects on reducing, diabetic amputee, comparison study, 92
**Pronation,** functional, biomechanical orthoses as initial treatment in patellofemoral pain syndrome and, 110
**Prosthesis**
diabetic amputees, plantar pressure reduction and, prosthetic foot comparison, 92
liner material, flow constraint and loading rate effects on, human tissue mechanical response to, 15
physical activity level and walking accommodation, transtibial amputation and, 60
Seattle Lite Foot vs. Genesis II, comparison during walking and running, 9
socket digitization, surface curvature and, 55
transradial and transhumeral, myoelectrically controlled, roll-on sleeves for, 88
upper limb, perceptual assimilation of, 5
**Prosthetic design,** kinematic and kinetic data, 120
**Prosthetic socket,** transtibial, fabrication using selective laser sintering, 97

**Q angle,** biomechanical orthoses as initial treatment in patellofemoral pain syndrome and, 110

**Re-Flex VSP prosthesis,** physical activity level effects on walking and, transtibial amputee, prostheses comparison, 60
**Running,** Seattle Lite Foot vs. Genesis II comparison and, 9

**SACH foot,** physical activity level effects on walking and, transtibial amputee, prostheses comparison, 60
**Scapular winging,** fixation orthosis for, in facioscapulohumeral dystrophy, 106
**Scoliosis,** idiopathic, bracing for, history and future trends in (editorial), 2
**Selective laser sintering,** transtibial prosthetic socket fabrication and, 97
**Silicone,** prosthetic liner material, mechanical properties of, 15
**Strain rates,** prosthetic liner material, mechanical properties of, 15
**Surgery**
preoperative planning, preoperative molds to decrease operating room time for external fixator application, 52
wound healing and, transtibial amputee, 48

**Thermoplastic elastomer,** prosthetic liner material, mechanical properties of, 15

**Urethane,** prosthetic liner material, mechanical properties of, 15

**Walking**
Seattle Lite Foot vs. Genesis II comparison and, 9
speed, low-cost system for assessment of, 117
**Wound healing,** surgical technique and, transtibial amputee, 48
